10.15.2.5: Question. A jar contains 24 marbles, some are green and others are blue. If a marble is drawn at random from the jar, the probability that it is green is $\frac{2}{3}$. Find the number of blue balls in the jar.

Answer: 8.

Solution: Given that the total number of marbles in the jar is 24. Let, the number of Blue marbles in the bag be x and the number of Green marbles in the bag be y . So, we have

$$x + y = 24 \quad (1)$$

Let, G be an event that a randomly drawn marble is of colour Green.

$$\Pr(G) = \frac{y}{24} \quad (2)$$

We know that the probability of drawing a Green marble is $\frac{2}{3}$.

$$\Pr(G) = \frac{2}{3} \quad (3)$$

From equations (2) and (3), we get:

$$\frac{y}{24} = \frac{2}{3} \quad (4)$$

$$\implies y = 16 \quad (5)$$

Now we can substitute this value of y in equation (1) to get:

$$x + 16 = 24 \quad (6)$$

$$\implies x = 8 \quad (7)$$

Therefore, There are 8 Blue marbles in the jar.
